Only associations are drawn: an edge appears where a pair is combined at least 1.4 times more often than quasi-independence implies ($\log_2 \text{obs/exp} \geq 0.5$) at BH $q < 0.05$. Width and colour scale with the excess. Dissociations are in Figures 1 and 2. Source: BHHT cross-verified database of notable people (Laouenan et al., Scientific Data 9:290, 2022).
