

Each crossing across the modern period, 1400 to 1949

Half-century birth cohorts with 95% bootstrap intervals. No pair carries a trend distinguishable from flat once the six tests are adjusted: at this level of aggregation the association structure is close to stationary, and the movement visible in the 13-sector layer is largely reorganisation inside domains not across them. The one visible break is around 1800, when four of the six move toward zero.
