

Six predictions, written before the series was computed

Military + Exploration & Invention -

Politics + Military -

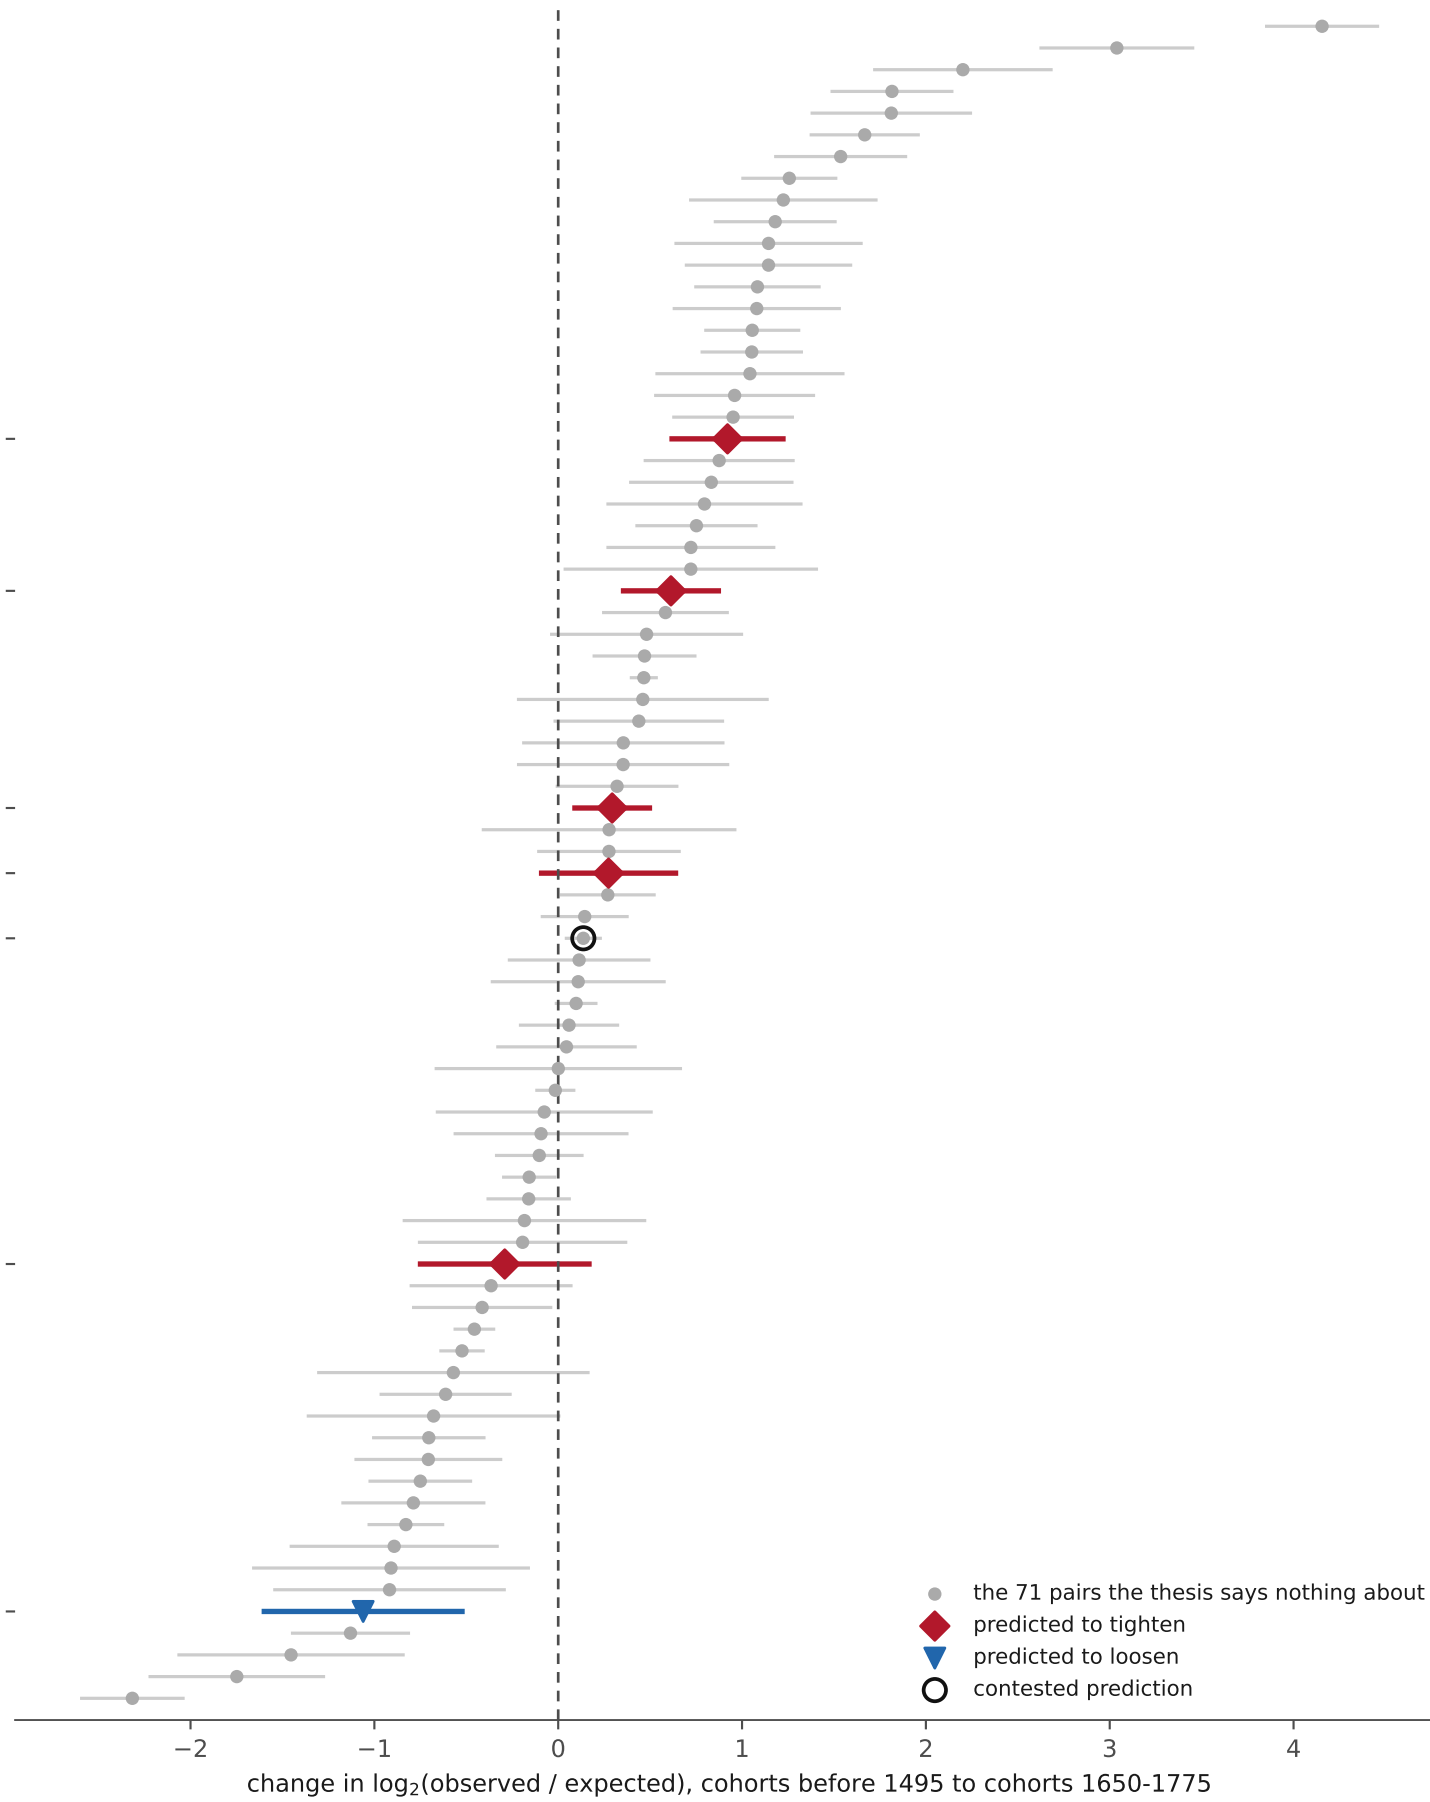

Politics + Administration & Law -

Military + Big business -

Military + Nobility -

Administration & Law + Military -

Military + Religion -

Every one of the 78 sector pairs is shown; only the predicted ones are labelled. Five of the six move as the thesis says they should, which a sign test puts at $p = 0.11$ and a permutation test on the size of the moves at $p = 0.12$. The one that fails is administration and law with the military, which is the fiscal-military state's central claim. Bars are 95% intervals on the change. Europe only, 25-year birth cohorts. A cohort born in year b has its main career in $[b+25, b+65]$, so the cohorts exposed to a 1560-1660 window are those born between 1495 and 1635; they are held out of the before-and-after contrast, not assigned to a side.
