

Thirty-six countries with at least 1,000 elites crossing two domains

How much each country contributes

How often elites cross a domain boundary

Group by crossing profile (see figure C3)

China group Germany group Sweden group US group

These 36 countries hold 90% of all domain crossings in the database. Bars are 95% Wilson intervals.
Country is the cross-verified citizenship of the source, projected onto modern states, so the label is anachronistic for anyone born before the state existed.
Coverage is encyclopaedic coverage: how many elites a country contributes says as much about which Wikipedia editions write about it as about the country.
Source: BHHT cross-verified database of notable people (Laouenan et al., Scientific Data 9:290, 2022).
