

A map of elite power structures

Both axes are $\log_2(\text{observed} / \text{expected})$ inside the country. Point size states how many crossings behind the country. The same three countries occupy the unusual corner of both panels. Canada, Australia and New Zealand are the only ones where rule combines with money more often than chance, the only ones where coercion combines with the ideational domain more often than chance, and two of the three are the only ones where rule does not combine with coercion. Everywhere else money is the domain that keeps its distance from both rule and coercion. Country is the cross-verified citizenship of the source, projected onto modern states, so the label is anachronistic for anyone born before the state existed. Coverage is encyclopaedic coverage: how many elites a country contributes says as much about which Wikipedia editions write about it as about the country. Source: BHHT cross-verified database of notable people (Laouenan et al., Scientific Data 9:290, 2022).
