

Where countries differ most at the level of sectors

The 14 sector pairs combined by at least 50 elites in every one of the 24 countries with 5,000 or more elites spanning two sectors, ordered by how much the score varies across them. The floor matters: without it the ranking fills up with small nobility pairs whose spread is sampling noise. Countries keep the grouping from the four-domain analysis, which was not fitted on any of these numbers. Country is the cross-verified citizenship of the source, projected onto modern states, so the label is anachronistic for anyone born before the state existed. Coverage is encyclopaedic coverage: how many elites a country contributes says as much about which Wikipedia editions write about it as about the country. Source: BHHT cross-verified database of notable people (Laouenan et al., Scientific Data 9:290, 2022).
