

Which sectors of power do elites combine?

Pairwise association under quasi-independence, 3500 BCE to 2020 CE

Cells give $\log_2$ of observed over expected co-occurrence among the 723,260 elites coded in two distinct sectors.

Red = combined more often than the sector marginals imply; blue = combined less often. Hatching marks a pair whose departure from the reference model is not distinguishable from zero (BH $q \geq 0.05$).
