

The four rupture cases against the countries that had no rupture

Descriptive, not causal. Dashed vertical lines mark each country's first exposed cohort. The series are noisy, the treated countries are not on a common path before exposure, and three of the four share the same 1918 event, which is why the event study above cannot separate a shock from everything else happening to those countries at the time. Source: BHHT cross-verified database of notable people (Laouenan et al., Scientific Data 9:290, 2022). Shocks hand-coded, see data/processed/shocks/shock_list.csv.
