

The domain structure does not drift. It steps.

The same six series carried no linear trend distinguishable from flat. Five of the six carry a level shift: three dated at 1750, two at 1550, and the pooled scan puts one common date at 1750. The two results are not in tension: a structure that holds a level and then moves to another has no trend to find. The vertical line marks the best-fitting date even where the shift is not distinguishable. Grey dashed is the no-shift fit, black the fitted step.
