

Politics and the military everywhere; politics and business only sometimes

The pair that divides the set

Money and arms, cohort by cohort

Left: politics with business is associated in the Irish, Russian and German cohorts and dissociated in the American, French, Latin American, Xinhai, Chinese Communist and Iranian ones, a spread of 1.5 log points from the Iranian cohort to the Irish one. Right: all fourteen cohorts with both cells readable sit above the horizontal line, so an elite that held office also held a commission almost everywhere, while the horizontal position moves freely. The Meiji Restoration, the one cohort whose politics-military score is negative, is absent here because its business cell is sparse. The colour shows this is not a matter of date: the cohorts left of the vertical line open between 1775 and 1978, those right of it between 1642 and 1918.

A cohort is the elites who were adults in a country whose political order was at stake while the revolution ran. Sectors are coarsened to seven groups so a cohort cell has enough cases, and association is refitted inside each cohort, which makes cohorts of very different size comparable. Cells holding fewer than ten people are flagged sparse and dropped from every count, since the score there follows the continuity correction more than the data. These are descriptive cohorts, not treatment groups.
